Namaste! I'm Anuj Rawat, a seasoned Software Developer and Architect with expertise in building scalable, high-performance web and mobile applications. I specialize in full-stack development, software architecture, and automated testing, with a focus on delivering robust, maintainable solutions. Known for my ability to quickly identify and resolve issues, I consistently enhance user experiences and drive innovation through thoughtful design and execution.

PROJECTS

•Headless E-commerce Platform (Next.js, Sanity CMS, AWS-EC2, WooCommerce, Tailwind)

Built a fully no-code, customizable headless e-commerce platform inspired by Shopify and GoDaddy, designed to be completely free for small businesses. Developed the frontend using Next.js, Framer Motion, ShadCN and Zustand, with real-time customization enabled via Sanity CMS through custom schemas and API integrations. Deployed the backend using WooCommerce on a WordPress + Apache stack hosted on AWS EC2, managing products, analytics, and sales operations.

• GitHub: https://github.com/rawatanuj07/ecommerce-ec2.git

•Full-Stack E-commerce Platform (Next.js, Sanity CMS, Stripe)

Developed a full-stack e-commerce application using Next.js and React, fully powered by Sanity CMS for product management, real-time stock updates, and dynamic content. Implemented custom authentication, category filtering, and advanced search feature for enhanced user experience. Integrated Razorpay for secure payment processing, resulting in a seamless, end-to-end shopping flow with full content control from Sanity Studio (including real time editing).

•Demo: https://youtu.be/WzHc-GUxqCc?si=qk_vq7swcS_qHwrt

•Historical Token Price (Next.js, Redis, BullMQ, Zustand, Alchemy SDK, MongoDB)

Developed a full-stack system to retrieve and interpolate historical token prices using Next.js, Node.js (Express), Redis, and MongoDB. Implemented REST APIs with caching, custom interpolation logic, and a BullMQ-based scheduler to fetch and store daily prices from token creation. Integrated the Alchemy API for historical data and built a responsive frontend with real-time price querying, cache fallback, and full-history scheduling.

•Invoice-Generating App: In this app, I have implemented authorisation and authentication with jwt and middleware, created api's to integrate frontend to backend.

E x p e r i e n c e

2024 – PRESENT
Freelance| Full Stack Developer.

Aug 2023 – June 2024
Full Stack Developer | Yapita Health Pvt. Ltd. | Gurugram, Haryana.
Handled SDLC—designing, coding, testing, and maintaining software applications. I improved performance through code optimization. Also managed version control systems (Git) for codebase integrity.

JAN 2023 – July 2023
Quality Assurance Analyst | Heliverse Technologies | Gurugram, Haryana
I ensured product quality by identifying issues, writing test scripts, and automating feature testing. I maintained detailed internal documentation and participated in requirements analysis. This led to improved workflows and adherence to product specifications.

Feb 2022 – Dec 2022
Software Tester | Fly To Web Pvt Ltd | Faridabad
Collaborated with QA team to test software quality and create test reports accordingly.
I also Developed, implemented and maintained automated testware for scripts, functions and programs to boost testing efficiency.
